PROJECT 01 | OVERVIEW

# Resumeez - ATS Resume Builder & Rule-Based Evaluator

Helping job seekers create structured, ATS-readable resumes through guided CV generation and consistent formatting.

PROJECT DETAILS

Role: UI/UX Designer & QA Lead (Team of 3)

Methods: R&D (Hannafin & Peck Model) & Shneiderman's 8 Golden Rules

Stack: Figma, React, TypeScript, PDF.js, Firebase

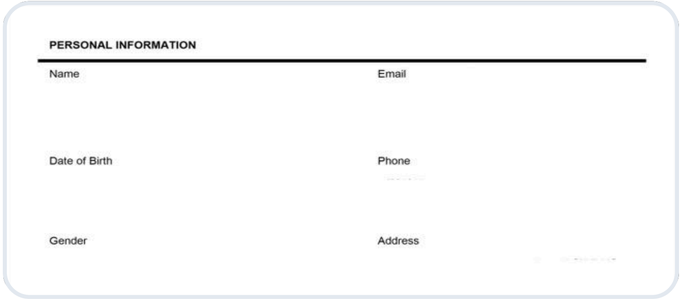

Live Web App

## The Problem: Flaws of Existing Campus CV Generators

While preparing for our university internship program, we identified several critical UX and structural flaws in the auto-generated CV system:

1. Inefficient Spatial Layout (scattered across 5 pages)
2. Rigid Structure (lacks achievement sections)
3. Zero ATS Feedback on PDF readability.

M Adib Aulia Nurkhafif, UI/UX & Product Design | Frontend Engineering Background

Jl. Rimat Bakti No. 12, RT/RW 01, Desa Sijono, Batang, Jawa Tengah 51252, Indonesia, 6282241033809-
, www.linkedin.com/in/m-adib-aulia-nurkhafif, https://1frazel.github.io/Web-Portfolio-Adib-Aulia/, adibnk11@gmail.com

PROFILE

Frontend Engineer with hands-on experience in Product/UI/UX Design, building responsive web and mobile products from user flows and wireframes to interactive prototypes and production-ready interfaces. Experienced in Figma, prototyping, user interviews, and translating design decisions into technically feasible products. Brings an engineering perspective to product design through experience working with technical constraints, developers, and real-world product requirements. Seeking a UI/UX or Product Design internship to deepen experience in product discovery, usability testing, and end-to-end design.

EMPLOYMENT HISTORY

From a fragmented campus CV to a structured, readable resume.

## The Solution: Preventive Formatting Meets Rule-Based Scoring

### 1. Standardized 6-Section CV Builder

Guide content into six consistent sections with a structured layout, addressing rigid organization and scattered formatting at the source.

### 2. Automated Regex & PDF.js CV Checker

Parse PDF content with PDF.js and apply rule-based regex checks (>5 valid words) to evaluate completeness across 6 standard ATS categories.

PROJECT 01 | DESIGN DECISIONS

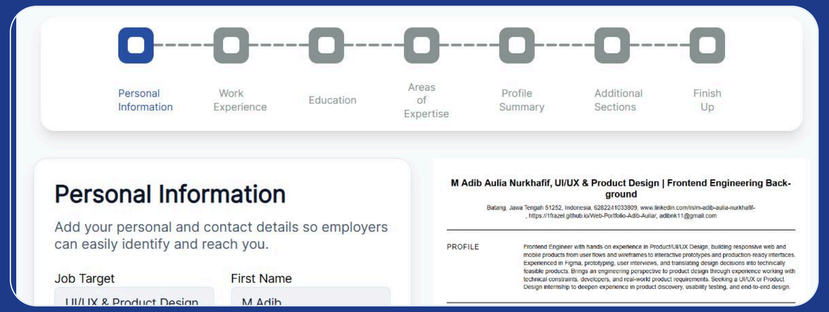

# Applying Shneiderman's 8 Golden Rules

Breaking 8 complex resume entities into a 7-step guided wizard reduces short-term memory load, helping users focus on one step at a time.

KEY DECISION #1

## Split-Screen Builder & Error Prevention

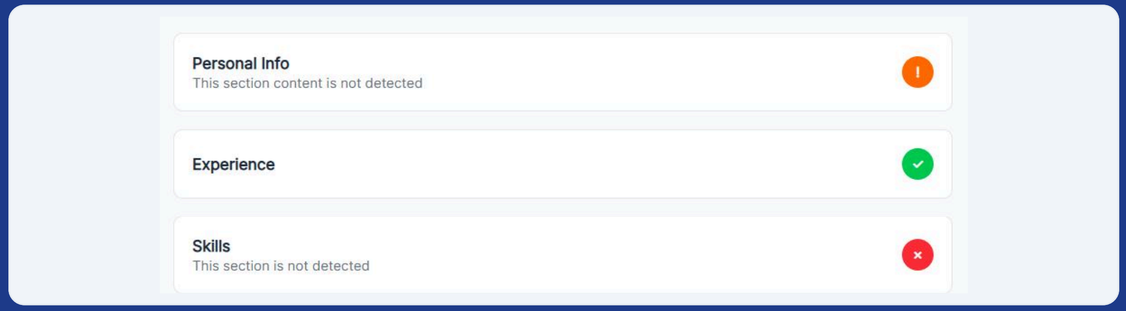

- Real-Time JSON Live Preview
- Proactive Mandatory Field & State-Lock Validation

KEY DECISION #2

## Explainable ATS Checker UI

- Header-Only Warning (<5 words)
- Complete (>=5 valid words)
- Missing Section

## Universal Usability: Bilingual Support Toggle & Responsive Desktop-to-Mobile Layouts

Designed adaptive breakpoints and an instant ID/EN localization toggle so students can preview and manage their resumes seamlessly across devices.

PROJECT 01 | TESTING & ITERATION

### User Acceptance Testing (UAT)

# 83.4%

of 30 respondents agreed Resumeez helped them build structured ATS-compliant CVs

### System Usability Scale (SUS)

# 69.83 (Grade C+)

Scored above the global benchmark average (68.0), rated Marginal High / Good

### Blackbox QA Reliability

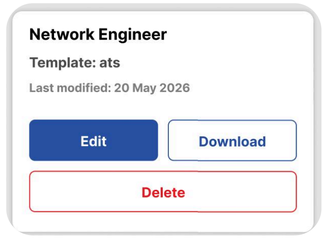

# 18 / 18 Passed

100% pass rate across XSS sanitization, 10k-char stress tests, and 5MB limits

## What Testing Revealed: Turning 30% User Friction into Actionable UX Iterations

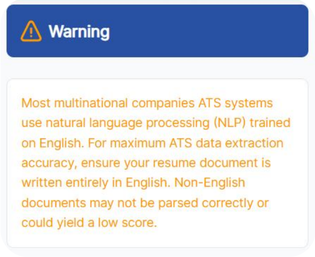

### Fixing Accidental Double Downloads

Decoupling preview state from auto-download trigger

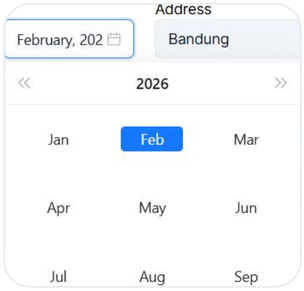

### Lexical Language Barrier

Adding English ATS standard onboarding tooltips

### Browser Autofill & Input Ergonomics

Replacing manual date/ city text inputs with Dropdown Selectors

Key Reflection:

## Designing Where UX Meets System Constraints

**Visual clarity must work within rule-based parsing rules, not compete with them.**
**Designing for real-world edge cases means balancing a guided experience with explicit system constraints.**

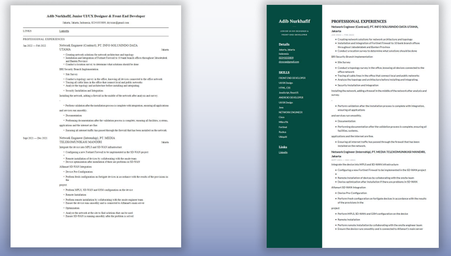

# 69.83

PROJECT 02 | RESEARCH & DISCOVERY

# Kompas.com - UX Research & News Portal Redesign

Decluttering Indonesia's news portal by balancing ad slots with a clean reading flow.

PROJECT DETAILS

Role: UI Designer & UX Researcher (Team of 5)

Methods: Onsite User Interviews, Persona Mapping, Sitemap, Taskflow, Low-Fi Sketching

Stack: Figma, Draw.io, Hand-Sketching Wireframe

Figma Prototype

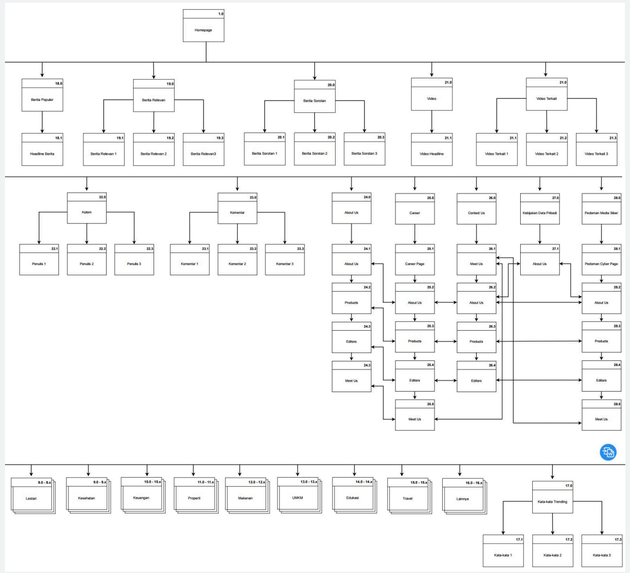

## User Research (3 Personas)

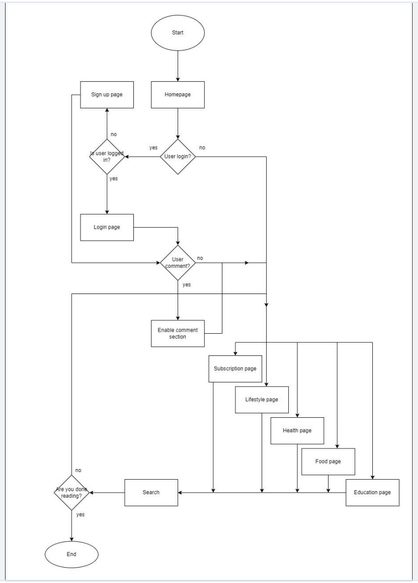

Interviews with Janice (20, Student), Aisha (31, Lecturer), and Anton (39, Shopkeeper) showed a TikTok/IG-to-Kompas reading habit and 3 pain points:

1. Intrusive Ad Clutter
2. Irrelevant Photos
3. Reading Exhaustion

## Sitemap & Taskflow

- **Category Sitemap:** Grouped Lifestyle, Health, Food, and Education in navbar.
- **Taskflow:** Separated reading/search from login-gated comments and subscriptions.

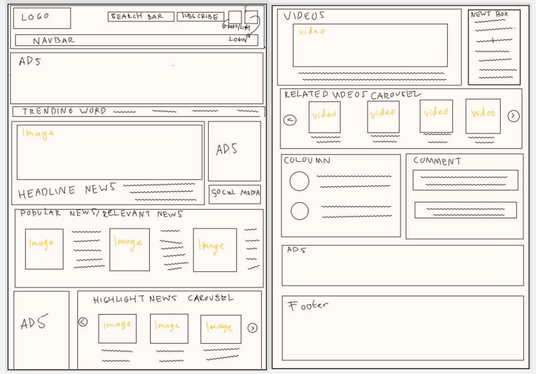

## Core Challenge: Ergonomics + Monetization

Removing advertisements completely is unrealistic for a media company. Our goal was to redesign the information hierarchy and whitespace distribution so readers enjoy a calm, structured reading flow while keeping commercial ad slots

## Low-Fi Wireframes & Ad Zoning

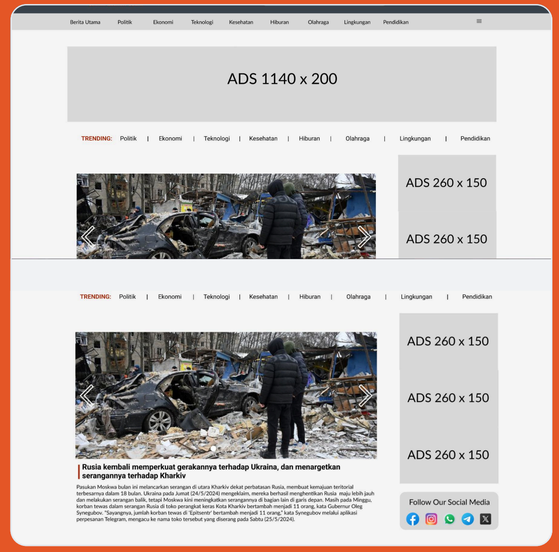

- **Utility Header:** Dark/Light Mode toggle, Trending Word, Subscribe & Search Bar.
- **Modular Grid:** Headline, Popular/ Relevant News & Video Carousels.
- **Isolated Ads:** Confined to top banners & sidebars.

**KEY DECISION #1**

## Breathable Homepage

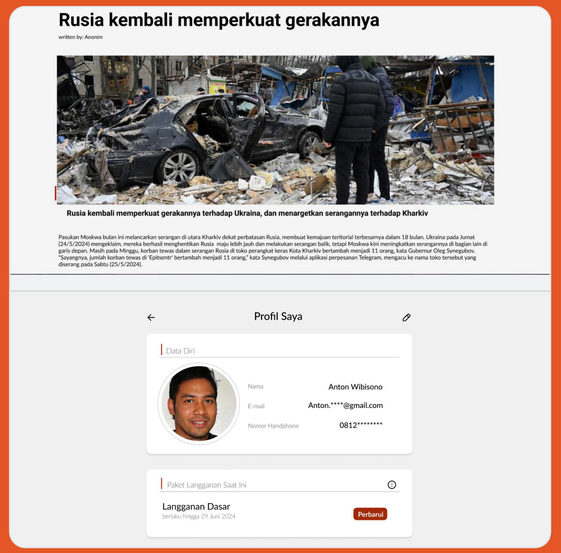

- **Extra Whitespace:** Reduced visual clutter across cards.
- **Manageable Ad Slots:** Bounded 1140×200 top & 260×150 sidebar ads.
- **Clear Hierarchy:** Prioritized main headlines.

**KEY DECISION #2**

## News Detail & User Page

- **Top-to-Bottom Flow:** Reorganized News Detail Page with extra whitespace to reduce reading exhaustion.
- **Desktop User Page:** Simple profile, comment & subscription view.

## Impact & Key Learnings

- **Impact:** Translated 3 persona interviews into an intuitive layout without removing commercial ads.
- **Learning:** Extracted user insights to guide UI decisions in a 5-person team.

PROJECT 03 | DISCOVERY & ARCHITECTURE

# Recipeez - API-Driven Recipe Finder & Smart Meal Planner

Simplifying daily cooking decisions by transforming complex Spoonacular API nutritional and ingredient data into an intuitive mobile experience.

PROJECT DETAILS

Role: Solo UI/UX Designer & Android Developer

Methods: Competitive Benchmarking, IA Flowcharts, Waterfall SDLC

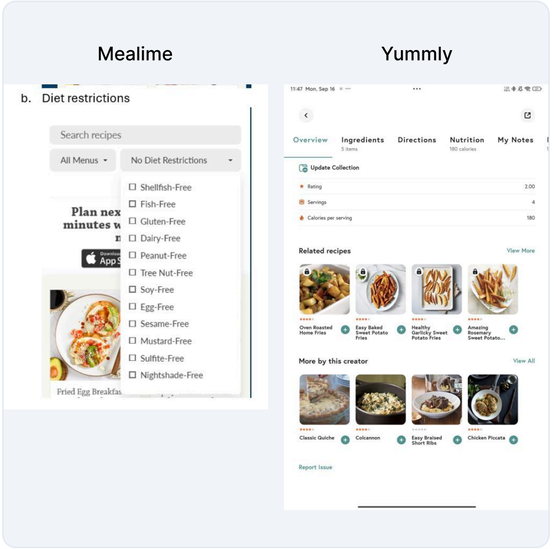

Stack: Figma, Java, XML, Android Studio, Spoonacular API, Retrofit, SQLite

Figma Prototype | Early Access App

## Competitive UX Audit & API Mapping

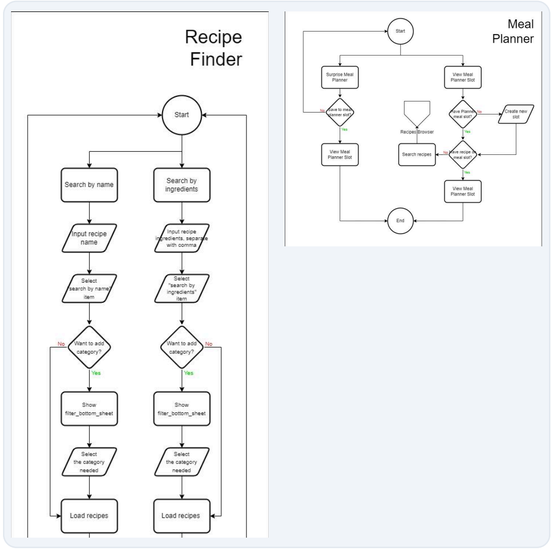

Audited 5 apps (Yummly, Mealime, Paprika, Whisk, CookBook) to structure Spoonacular API data:

1. **Multi-Parameter Filtering** (Calories, Macros, 14 Cuisines, 7 Diets),
2. Tabbed Hierarchy,
3. Fridge-First Ingredient Search.

## Structuring 5 Core User Flows

- **Dual Search & Bottom Sheet:** Branches Name vs. Ingredient search into a filter_bottom_sheet.
- **Smart Meal Planner:** Supports calorie-based Surprise Meal Planning (3x daily) & manual slots linked to Ingredients Cart.

## Core Challenge: Taming Data-Heavy API Responses on Mobile

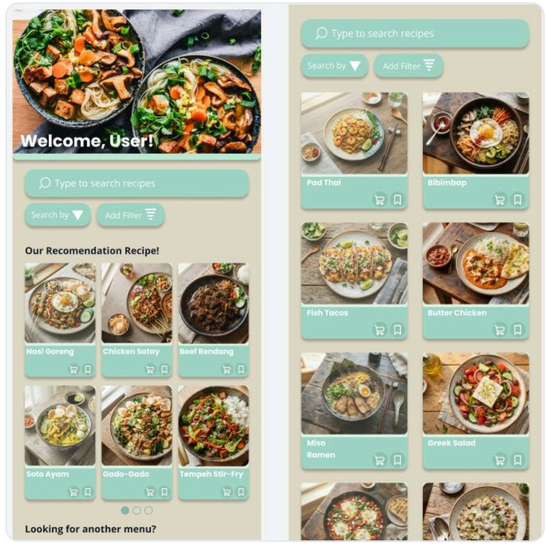

Used progressive disclosure the 2-column grids, bottom sheets, and segmented tabs. To keep dense nutritional and cooking data scannable on small screens.

PROJECT 03 | MOBILE UI & EXECUTION

KEY DECISION #1

## Homepage & Recipe Browser

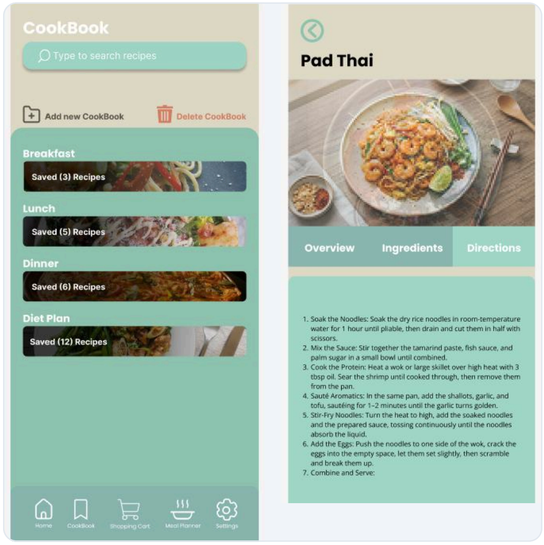

- **Visual 2-Column Grid:** High-contrast dish cards with quick Save & Cart actions.
- **Dual Search & Filter Sheet:** Toggle dish names or comma-separated ingredients with quick Cuisine & Diet filters.

KEY DECISION #2

## Segmented Details & Cookbook

- **Eliminating Infinite Scroll:** 3-tab view (Overview, Ingredients, Directions) keeps measurements accessible while cooking.
- **Personalized Cookbook:** Groups saved dishes into Breakfast, Lunch, Dinner & Meal Plan.

ENGINEERING EXECUTION

## 12-Week Solo Android Build

- **Async Pipeline:** Integrated Retrofit for JSON parsing and Glide for smooth RecyclerView pagination.
- **Offline & Edge Cases:** Built SQLite/Room schemas for saved recipes and handled empty/error states.

## PROJECT IMPACT

Delivered a functional Android app bridging UX benchmarking with live Spoonacular API data.

## KEY LEARNING

Learned how third-party API payloads directly shape mobile UI components and state flows.
